Figure 1: Schematic representation of the experimental design. The figure is divided into two main sections: 'Pretest' and 'Main Experiment'. The 'Pretest' section includes 'Pretest 1' (a 2x2 factorial design with 'Condition' and 'Group' as factors) and 'Pretest 2' (a 2x2 factorial design with 'Condition' and 'Group' as factors). The 'Main Experiment' section includes 'Main Experiment 1' (a 2x2 factorial design with 'Condition' and 'Group' as factors) and 'Main Experiment 2' (a 2x2 factorial design with 'Condition' and 'Group' as factors). Each section shows a flow from 'Pretest' to 'Main Experiment'.

Figure 1 illustrates the experimental setup. A participant is seated at a table, looking at a screen. On the screen, a 3D model of a hand holding a tool is shown. A red dot on the screen indicates the target location. The participant's hand is positioned near the tool. The setup is used for studying the effects of tool use on reaching behavior.

Figure 1

Age Group	Percentage
18-24	10
25-34	35
35-44	25
45-54	15
55-64	10
65-74	5
75-84	2
85+	1

am

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was significantly higher than the number of incorrect responses in all cases. Error bars represent the standard error of the mean.
